INTRODUCING *SLM* SOFTWARE for EDD's DISTRIBUTION ENGINEERING WORKSTATION (DEW)

SLM – Spatial Linking Methodology - Software is a powerful, unique information management tool. **SLM** enables point-and-click, drill-down retrieval of virtually any form of legacy information. Think of random, direct access to *exactly what you need* vs. browsing through multiple hit lists of *possible* answers.

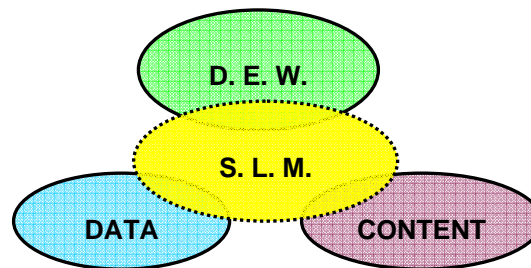

Save time and money, while dramatically improving productivity and responsiveness.

Cost savings and cost avoidance.

Using *Intelligent Icons*, **SLM connects EDD modeling output (Planning, Operations, and Control applications), directly to drawings (CAD/GIS/SVG), documents, (PDF/TIF/Word/Excel), sensor output, etc. to ensure end users quickly find the information they need with a few clicks vs. a few hours or days.**

***SLM's Intelligent Icons* enable a user-defined, hierarchical search process of all related information.**

For example, an Engineer is performing analytical calculations with DEW and needs to refer to associated GIS data. By clicking on an ***Intelligent Icon***, **SLM** retrieves the desired drawing and displays it on the screen. To find a related manual drawing (TIF), the Engineer clicks on a nearby ***Intelligent Icon*** to display an enlarged view of the TIF drawing, and a third ***Intelligent Icon*** to find detailed component information on page 70 in a large PDF manual. Problem solved in 3 clicks.

SLM Benefits

- **P**oint and click ease of use
- **R**apid user acceptance
- **F**acilitates change management
- **R**educes costs and improves productivity and responsiveness
- **S**cales from single application to the enterprise

Drawing Management, Inc. (DMI)

DMI, established in 1991, is a professional software and services organization. DMI provides software, consulting, and scanning services.
